

Evacuation, Weather Reroute and Disaster Relief BlinkerSigns®

Inclement weather and disasters often leave little time to properly warn drivers of the proper routes to shelters or safety. These weather conditions often obscure visibility of standard signage. TAPCO BlinkerSigns give advanced warning to allow drivers to turn around and take alternate routes preventing backups. Each BlinkerSign stands out and guide the way, and are built to weather harsh conditions.

- BlinkerSigns are portable—deploy or take down within minutes (folding models are available)
- Can be activated at the site, or remotely through a key fob or central PC
- After a storm has hit electrical outlets may be unavailable—off-grid solar BlinkerSigns are ideal for this scenario

Visible from up to two miles away
