Smooth and Fluted Aluminum Poles

Smooth poles These smooth, round poles will give your streetscape a classic contemporary look. They are made of high-strength aluminum for lasting durability. These poles are available in 2 3/8", 3" and 4" outside diameters to match with our luminaires, bases, brackets, finials and hardware.

Our standard round poles have a gloss black powder-coat finish. Custom lengths and colors are available. For direct burial mounts be sure to add 3 feet or more to desired height, or use a V-Loc™ breakaway anchor (on next page). Heavier fixtures and softer soils require deeper pole burial depths.

Fluted poles TAPCO offers a wide variety of decorative fluted aluminum poles. TAPCO Poles are extruded from high strength 6061-T6 Aluminum to exacting standards. They are available in 2 3/8", 3" and 4" O.D. in various wall thicknesses (standard is .125) and can be cut to any length. All poles can be painted in any color to match your next decorative project. Please call for further details.

Aluminum poles with base plates TAPCO aluminum poles are also available with base plates. These bases are needed when surface-mounting poles on concrete or asphalt or when extra base stability is called for. Plate gussets are welded to the pole and painted. 2 3/8" and 3" poles are available with a 7 3/4" circular plate while 3" and 4" diameter poles are available with a square 10" x 10" base.

3" OD pole with
7 3/4" diameter base plate

4" OD pole with
10" x 10" base plate
